To Whom It May Concern:

As an athletic club owner I know the importance of keeping the facility in prime shape for all members during all hours. Although we deep clean every day, send employees around the facility during normal business hours and ask members to wipe down after use it's impossible to ensure every surface has been **properly** disinfected. This is magnified in the locker rooms given the environment.

We decided to listen to what MicroShield 360 had to offer and applied the system into the facilities locker rooms/saunas. Although apprehensive at first the routine testing they provided proved the system drastically reduced the pathogens on treated surfaces by over 95%! As a result we have decided to roll out MicroShield 360 to the entire facility for complete preventative protection.

Sincerely,

Nick White
